#### **DETAILED ACTION**

### Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on December 5, 2005 has been entered.

### Response to Amendment

- 2. The amendment filed December 5, 2005 has been entered. Claims 20-31, 34-36, and 40-44 are examined below.
- 3. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
- 4. Applicant's arguments filed December 5, 2005, have been fully considered but they are not found persuasive.

## Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Application/Control Number: 09/856,274 Page 3

Art Unit: 1646

Claim 42 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 42 recite "1.0 about ug" which is confusing and ambiguous and the metes and bounds are not clear. One skilled in the art do not use the term "1.0 about ug" because "ug" is a unit of measure there is no ambiguity such as "about" which can be used to describe "ug."

### Claim Rejections - 35 USC § 102

5. Claims 20-31, 35-36 and 40-44 are rejected under 35 U.S.C. 102(e) as being anticipated by Williams (US 5,731,284) with evidence by Mayer et al. (US 5,352,683).

The reason for the rejection has been set forth in the previous office action.

Williams teaches the method of administering GDNF in an amount effective to treat neural injury (columns 16-18). Williams teach that GDNF is useful for the treatment of nerve damage and recites Alzheimer's disease as a cause of nerve damage (column 5, line 10). Furthermore, Williams teaches that neurotrophic factors are useful for treating the degeneration of nerve cells and loss of differentiated function that results from many different types of nerve damage including physical injury, damage due to ischemia, neurotoxins, neuropathy due to chronic metabolic diseases such as diabetes, and neurodegenerative diseases such as Parkinson's, Alzheimer's diseases and Amyotrophic Lateral Sclerosis (column 1, lines 12-33). The GDNF administration inherently affects sodium channel. The treatment with GDNF inherently alleviate the pain. The GDNF

Application/Control Number: 09/856,274

Art Unit: 1646

administration inherently affect the sodium channel current flow or expression. The administered GDNF of Williams will inherently affect the dorsal root ganglia or trigeminal neurons which are present in the administered animal or person. The sodium channels in the administered mammal inherently binds the lectin.

Mayer et al. provide evidence that neuropathic pain is due to damage to peripheral nerves or to central nervous system (column 1). Mayer et al. teach that metabolic disorders such as diabetes may be related to abnormal functioning of the pain related regions of the nervous system (column 1).

6. Claims 20-31, 34-36 and 44 are rejected under 35 U.S.C. 102(e) as being anticipated by Lin et al. (WO 93/06116) with evidence by Mayer et al. (US 5,352,683).

Lin et al. teach treatment by administering GDNF for nerve damage due to diabetes and Parkinson's disease (pages 3-4, 37-42 and 106-109).

The GDNF administration inherently affects sodium channel. The treatment with GDNF inherently alleviate the pain. The GDNF administration inherently affect the sodium channel current flow or expression. The administered GDNF of Williams will inherently affect the dorsal root ganglia or trigeminal neurons which are present in the administered animal or person. The sodium channels in the administered mammal inherently binds the lectin.

Mayer et al. provide evidence that neuropathic pain is due to damage to peripheral nerves or to central nervous system (column 1). Mayer et al. teach that

Application/Control Number: 09/856,274

Art Unit: 1646

metabolic disorders such as diabetes may be related to abnormal functioning of the pain related regions of the nervous system (column 1).

Page 5

7. Claims 20-31, 34-36 and 40-44 are rejected under 35 U.S.C. 102(e) as being anticipated by Yan et al. (US 5,641,749) with evidence by Mayer et al. (US 5,352,683).

Yan et al. teach the treatment of retinal ganglion cell injury such as glaucoma, physical injury, ischemia, neurotoxin, metabolic diseases such as diabetes, and neurodegerative diseases such as Parkinson's using GDNF (columns 1-5,14-20 and 25-6). Yan et al. teach that glaucoma can be characterized by painful eye (column 3, line 39). Yan et al. disclose the dosage of 1 ug/kg/day of GDNF administration (columns 4-5).

Mayer et al. provide evidence that neuropathic pain is due to damage to peripheral nerves or to central nervous system (column 1). Mayer et al. teach that metabolic disorders such as diabetes may be related to abnormal functioning of the pain related regions of the nervous system (column 1).

- 8. No claims are allowed.
- 9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael Pak whose telephone number is 571-272-0879. The examiner can normally be reached from 8:30 to 2:00.

Application/Control Number: 09/856,274 Page 6

Art Unit: 1646

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Brenda Brumback, can be reached on 571-272-0961. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
